

PatternPrint™

Stamped-Asphalt Surfacing System

Explore the Possibilities

Features and Benefits

- Fast Installation... little project downtime
- Apply to both new and old asphalt
- No hazardous waste during application
- Handles northern climate freeze thaw cycles
- High friction surface coatings
- Easily repaired... invisible seams
- Deicing salt resistant
- UV stable... maintains color for years
- Several patterns and colors to choose
- Flexible... conforms with asphalt movement
- Stock and custom colors

Typical Applications

- Roundabouts
- Safety Zones... Schools and Hospitals
- Raised Medians
- Delineation
- Bike paths
- Walkways
- Corporate Logos
- Driveways

The PatternPrint™ Surfacing System consists of imprinting a template pattern into a heated asphalt surface, lifting the pattern template and applying an acrylic coating to the stamped surface. A sealer can be applied to protect and provide an easily cleaned surface. The surface is left to cure prior to allowing traffic.

Contractors trained in asphalt printing and acrylic coating, are recommended for the installation of this Stamped-Asphalt Surfacing System.

Stamped-Asphalt can be applied into all new and some existing asphalt surfaces.
