

NEW PATTERNED PAVING PRODUCT FOR HIGH-TRAFFIC AREAS

ThermoPrintHT™ is a specially formulated decorative thermoplastic material that uses anti-skid aggregates to create this durable, road-marking material. ThermoPrintHT™ is typically installed to improve pedestrian safety at high-traffic intersections, while providing decorative enhancement to the cityscape. Preformed sheets are heat-applied to an asphalt surface and then stamped using a cable template pattern. The results? A surface that is durable, safe and decorative.
