

Green Bike Lanes

Pattern Paving Products has been developing and manufacturing high traffic decorative surfacing products for over 10 years. We have recently built a Green Bike Lane coating to address the new FHA interest in Green Bike Lanes as a traffic control device.

On April 15, 2011 the Federal Highway Administration signed a memorandum to issue Intermin Approval for the optional use of green colored pavement in marked bicycle lanes and in extensions of bicycle lanes through intersection and other traffic conflict areas.

To address this need Pattern Paving Products has created a Green Bike Lane coating under the RoadColor coating brand.

This Green coating meets the FHWA's color requirements.

- Pigments are UV stable to ensure long lasting color.
- Anti-slip granules have been added for extra traction.
- Coatings are easy to apply with roller, squeegee or sprayer.
- Fast drying polymers allow for quick to traffic installation.
- Water-based two-part epoxy modified acrylic system.
- Low VOC content, environmentally friendly.
- Highly durable, independant lab testing for abrasion resistance, adhesion, flexibility, water absorption, slip-resistance, and chemical resistance.

Please contact us for a demonstration of RoadColor Green Bike Lane Coating.
