FrictionPave™

High-Traffic Surfacing System
Rock Hard - Epoxy Tough

Features and Benefits
Apply onto both Asphalt and Concrete
Solid stone or with a pattern
Fast Installation... little project downtime
Handles northern climate freeze thaw cycles
Tested and meets DOT friction requirements
Easily repaired... invisible seams
Deicing salt resistant
UV stable... maintains color for years
Bauxite and granite stone chips available
Flexible...conforms with asphalt movement

Typical Applications
Safety Zones... Schools and Hospitals
Sharp corners and dangerous curves
Curb to Sidewalk Delineation
Driveways and walkways
Exit and entrance ramps
Pedestrian cross-walks
Raised Medians
Parking Decks
Bicycle lanes

FrictionPave™ Surfacing System consists of a specially formulated two-part binder topped with a pigmented or natural stone. Skid resistant and durable surfaces are provided using the FrictionPave™ Surfacing System on both Asphalt and Concrete.

Installers, trained in surface preparation as well as binder and stone application, apply the FrictionPave™ surfacing system.

Designers can choose from a variety of colored or natural stones to achieve the desired appearance.

FrictionPave™ can be applied onto both new or existing asphalt and concrete surfaces.
